The gateway to the future

The challenge for healthcare organisations today is not finding or buying AI technology, but getting care teams to adopt and rely on that technology as part of their everyday processes, practices, and workflows.

Nuance is a pioneer in conversational AI. Our Dragon Medical One is the basis for future innovative and cloud-based solutions for healthcare.

These include AI-supported clinical coding decision, virtual assistants and Ambient Clinical Intelligence, such as Dragon Ambient eXperience.

More than 1 million users trust Nuance's solutions worldwide. The quality, accuracy and power of Nuance's AI-powered speech recognition is available in Microsoft Azure cloud Australia!

Numerous reasons to use our AI powered, cloud-based Speech recognition—Dragon Medical One

Gateway to the future. The gateway to our future solutions is to start documenting within Dragon Medical One on the cloud and making highly accurate medical speech recognition available to all users on all devices—whenever and wherever it's most convenient.

Mobility. Single voice profile is created for each user and stored centrally in the cloud. This allows doctors, allied healthcare professionals and nurses to start dictating immediately, regardless of their workplace and the devices they use (computer, laptop, tablet, smartphone). They can benefit from a seamless and consistent user experience, whether they are in the hospital, in their office, on the road or at home.

Accuracy & quality. The very high initial detection accuracy is based on our latest AI technology. Thanks to automatic updates, the solution is always up to date and you benefit directly from the latest innovations. The user's single voice profile in the cloud learns continuously. In addition, the recognition quality is enhanced by the automatic microphone calibration and the accents' recognition.

Cost saving. The acquisition and the installation of large servers are no longer necessary. Compared to the on-premise solution, save valuable time through automatic updates and upgrades, and relieve your IT staff who can work on other projects.

Scalability. You remain flexible. Our solution offers maximum scalability and enables rapid implementation according to your needs, as the usual server and network restrictions are eliminated.

Security and compliance. Dragon Medical One runs in two Microsoft Azure data centres in **Australia**. Microsoft Azure supports compliance efforts related to Australia Privacy Act 1988 and its 13 principles, the General Data Protection Regulation (GDPR) and International Standards including ISO 27001: 2013. The environment with continuous data replication guarantees 24/7 high availability.

Compatibility. No limits with Dragon Medical One, always ready to capture clinical data quickly. No matter what EMR you use, whether you want to write a report in a MS Word document or send an email, you dictate where your cursor is. You also have the freedom in the choice of the dictation device - and if there is no microphone at hand - turn your smartphone into one, with our **PowerMic Mobile App**.

Instant availability. Get started and achieve a faster return on investment (ROI), you don't need any additional IT investment. Decide how many users to configure and you can quickly have Dragon Medical One up and running. This means that clinicians are ready to start dictating immediately, as no voice profile training is required.

Predictable budget with subscription model. With Dragon Medical One, you are choosing a Software-as-a-Service (SaaS) model for a limited time period. There are no unforeseen costs other than the monthly subscription fee. This allows you to reliably plan and control your spending.

Actionable insights. Access usage data and trends with the integrated **Dragon Medical Analytics** to proactively optimise users' efficiency and workflow. Make the best decisions at all stages of your project to maximise the potential of your investment.

About Nuance Communications, Inc.

Nuance Communications (Nuance) is a technology pioneer with market leadership in conversational AI and ambient intelligence. A full-service partner trusted by 90 percent of U.S. hospitals and 85 percent of the Fortune 100 across the globe, we create intuitive solutions that amplify people's ability to help others.
