NUANCE

Dragon Medical embedded in athenaOne

Conversational AI and speech-enabled workflows empower physicians to document the patient story more naturally.

Maximize mobile productivity with secure, cloud-based speech recognition designed for clinicians on the go. Dragon Medical embedded in athenaOne powers efficient documentation capture across general and specialty workflows.

Meeting healthcare demands for optimal outcomes
With no voice profile training, automatic microphone calibration, and automatic accent detection, Dragon Medical embedded is 33% more accurate than consumer-based speech recognition. AI-powered technology allows clinicians to create narrative documentation 5x faster than typing. Healthcare organizations benefit from the enhanced performance, security, and privacy today's providers require.

Professional-grade features designed for healthcare

— **Robust medical vocabulary** boosts accuracy by accessing current medical dictionaries, terms, phrases, and clinical formatting rules. Organizations, departments, and individuals can customize their personal vocabularies for predictable performance.
— **SpeakAhead technology** improves satisfaction when users can continue speaking at their own pace without waiting for text generation or voice commands to complete.
— **A single voice profile** stored in the cloud offers individuals anytime, anywhere access to custom vocabularies and templates across mobile, web, and desktop apps.
— **Support healthcare compliance** and end-to-end security with a cloud-based solution hosted on Microsoft Azure, a HITRUST CSF-certified hosting infrastructure, and speech-related data communicated over 256-bit encryption channels using TLS protocols.

KEY BENEFITS

— Streamlined capture of narrative content to effectively inform patient care, billing, and coding.

— No additional software to install or maintain, and no additional usernames or passwords to remember.

— Used in combination with Dragon Medical One, users seamlessly move across devices and applications through a single user voice profile.

KEY FEATURES

— Deeply embedded within athenaOne (iOS) to support voice dictation on the go.

— Secure cloud-based solution hosted on Microsoft Azure, a HITRUST CSF-certified hosting infrastructure.
